

Case Study

The Fire Brigade were concerned about the area below the folding doors the possibility of damaging equipment as they were lowered so they hatched the keep clear zone where the doors operate with Yellow preform as shown on the photo's below.

They looked at paint but road marking paint will only last approximately 6 months. Preform was suggested as an alternative long life product that will out last the paint and will last for some 3-5 years.

This yellow cross hatching was applied January 06.

This are located the Fire Station located on the corner of Springvale Rd and Highbury Rd.

I would be happy to meet with your people either at the Districts or Headquarters to look at the possible application of AWIS Preform to CFA Stations throughout the state.

If you have a similar problem please call and we will discuss some options.
