

VALVE BOX VACUUM

Valve boxes and below Ground Fire Plugs, over the years accumulate a lot of soil and Debris, that hinders the Operation of the Valve or Ground plug. The soil and debris needs to be removed.

In todays, day and age we cannot just put a gloved hand down it and clean it out. There are many nasties that are found in these locations. We have a vast array of deadly spiders that lurk in these locations not to mention the used needles.

Removal of debris from valve and Ground Plug boxes need to be safe and quick.

The Valve Box Vacuum removes debris from the Valve box and below Ground Fire plugs quickly and safely.

Compressed air is directed up the throat of the vacuum creating a powerful suction that works very effectively on Mud, Sand and Water.

By moving the vacuum's serrated edge against the dirt and debris in the bottom of the box, the vacuum will make short work of even the muddiest of boxes.

The venturi effect sucks up the most stubborn mud and sand.

VALVE BOX VACUUM

Simple and easy to operate.

Just connect to a an air source.

Adjust the valve to suit the valve box condition.

Start sucking out the debris.
